PASTE / INSERT THE FINAL APPROVED WORKFLOW HERE

LNDRY PHASE 1 MVP — COMPLETE CLIENT WORKFLOW

1. Platform Overview

LNDRY is a marketplace where customers can find nearby laundry vendors, compare their services and prices, select a vendor, schedule a pickup, pay online, and track the laundry order until delivery.

The Phase 1 system consists of:

1. Customer Mobile App
 2. Vendor Partner Mobile App
 3. Vendor Delivery Partner access
 4. Admin Operations Dashboard
-

2. Main User Roles

2.1 Customer

The customer can:

- Register through mobile OTP

- Select an exact address using Google Maps
- Search laundry services
- Browse service categories
- View nearby vendors
- Compare vendor prices and ratings
- Select a vendor
- Select clothing items and quantities
- Select a 60-minute pickup slot
- Pay through Razorpay
- Track order status
- Provide pickup and delivery OTPs
- View order history
- Rate and review the vendor

2.2 Vendor Owner/Admin

The Vendor Owner/Admin manages the laundry business.

The Vendor Owner/Admin can:

- Register the laundry business
- Submit documents for approval
- Create the public vendor profile
- Add GST details when available
- Set the business location
- Set the service radius
- Create services and pricing
- Add clothing items under services
- Manage daily capacity
- Manage available pickup slots
- Receive and accept or reject orders
- Add delivery employees
- Assign or reassign delivery employees
- Update laundry-processing statuses
- View earnings and performance

2.3 Vendor Delivery Partner/Employee

The Delivery Partner handles pickup and delivery.

The Delivery Partner can:

- Log in using an employee account
- View assigned pickup and delivery orders
- View the customer's confirmed address
- Open the location in the Google Maps application

- Enter pickup OTP
- Confirm pickup completion
- Enter delivery OTP
- Confirm delivery completion

The Delivery Partner cannot:

- Change vendor prices
- Create services
- Edit the vendor profile
- Approve or reject vendor applications
- Change business documents
- View the vendor's full administrative settings

2.4 Platform Admin

The Platform Admin manages:

- Vendor applications
- Vendor approvals
- Vendor service radius
- Service categories
- Vendor activation and deactivation
- Customer accounts
- Orders
- Exceptions
- Vendor capacity
- Vendor performance
- Reports and analytics

3. Vendor Registration Workflow

Step 1: Vendor opens the Vendor App

The vendor selects:

Register as a Vendor

The vendor enters a mobile number.

The system sends an OTP.

Step 2: Mobile OTP verification

The vendor enters the OTP.

After successful verification:

- The mobile number is verified
- A temporary vendor account is created
- The vendor is taken to the application form

The vendor does not yet have permission to publish services or receive orders.

Step 3: Vendor enters personal details

The vendor submits:

- Owner's full name
- Primary mobile number
- Alternative mobile number, if available
- Email address
- Owner identity details

Step 4: Vendor enters business details

The vendor submits:

- Laundry or business name
- Business description
- Full business address
- Opening time
- Closing time
- Working days
- Pickup availability
- Delivery availability

Step 5: Vendor uploads documents

The vendor uploads:

- Owner identity document
- Shop or business photograph
- Business registration document, if available
- GST certificate, if available
- Other documents required by the business

GST remains optional when the vendor does not have a GST registration, unless the client makes it mandatory.

Step 6: Vendor selects exact business location

The Vendor App provides:

- Address search
- Current-location detection
- Google Maps location selection
- Exact map-pin placement

The vendor searches for the business address or uses the current location.

The vendor can move the pin and confirm the exact business location.

The location is saved with:

- Address
- Latitude
- Longitude
- Exact map-pin position

Step 7: Vendor requests a service radius

The vendor selects the required service area.

Example:

- 5 km
- 6 km
- 10 km

The vendor's selected radius is treated as a request.

The Platform Admin makes the final decision.

Example:

- Vendor requests 10 km
- Admin approves 6 km
- The vendor is visible only to customers within the approved 6 km radius

Step 8: Vendor submits the application

The vendor reviews:

- Owner details
- Business details
- Documents
- GST information
- Business location
- Requested service radius

The vendor submits the application.

The application status becomes:

Waiting for Approval

The vendor sees:

Your vendor application has been submitted successfully. You will be notified after verification.

4. Admin Vendor-Approval Workflow

Step 1: New application appears in the Admin Dashboard

The Admin Dashboard shows a new request under:

New Vendor Applications

The admin can review:

- Owner's name
- Business name
- Phone number
- Email address
- Business description
- Business address
- Google Maps location
- Uploaded identity document
- Business documents
- GST details
- Shop photograph
- Requested service radius

Step 2: Admin verifies the application

The admin checks:

- Whether the vendor identity is valid
- Whether the business details are correct
- Whether the location is valid
- Whether the documents are readable
- Whether the selected service radius is acceptable

Step 3: Admin decision

The admin can:

- Approve the vendor
- Reject the vendor
- Request corrections

When approved

The vendor receives:

- SMS
- Email
- In-app notification

The message confirms that the vendor can log in and complete the business setup.

When rejected

The vendor receives:

- Rejection reason
- SMS
- Email
- In-app notification

When correction is requested

The vendor receives:

- Details of the required correction
- Access to edit the application
- Option to resubmit

5. Approved Vendor Setup

After approval, the vendor logs in using mobile number and OTP.

The Vendor App now opens the full Vendor Owner/Admin dashboard.

The vendor completes the public business profile.

The vendor enters:

- Public laundry name
- Logo or shop image
- Business description
- Contact information
- Business address
- Confirmed Google Maps location
- Opening and closing times
- Working days
- Pickup availability
- Delivery availability
- GST number, when applicable

The profile becomes visible to customers after the vendor publishes at least one active service.

6. Vendor Delivery Employee Setup

The Vendor Owner/Admin can add delivery employees.

For each employee, the vendor enters:

- Employee name
- Mobile number
- Employee ID or reference
- Active or inactive status

The employee receives login access through mobile OTP.

The employee sees only assigned pickup and delivery orders.

When an order is accepted:

- The system can automatically assign an available delivery employee

- The Vendor Owner/Admin can change the assigned employee when required

The employee receives an order notification.

7. Service Category Structure

The Platform Admin manages the main laundry categories.

Example categories:

- Wash & Fold
- Wash & Iron
- Dry Cleaning
- Ironing
- Shoe Care
- Premium Laundry
- Blanket Cleaning
- Curtain Cleaning
- Carpet Cleaning

Multiple vendors can publish services under the same category.

Example:

Wash & Iron

Inside this category, the customer may see:

- Vendor A — Wash & Iron
- Vendor B — Premium Wash & Iron
- Vendor C — Express Wash & Iron
- Vendor D — Budget Wash & Iron

This allows the customer to compare different vendors offering the same type of service.

8. Vendor Service and Pricing Setup

Step 1: Vendor selects a category

The vendor selects an active category created by the Platform Admin.

Example:

Wash & Iron

Step 2: Vendor creates the service

The vendor enters:

- Service name
- Service description
- What is included
- What is not included
- Estimated completion time
- Pickup availability
- Delivery availability
- Service image, when required

Step 3: Vendor adds clothing items

The vendor creates the item list under that service.

Example:

Item	Price Type
T-shirt	Per piece
Shirt	Per piece
Trouser	Per piece
Saree	Per piece
Regular clothes	Per kilogram
Blanket	Per piece
Shoes	Per pair

Step 4: Vendor adds prices

For every item, the vendor adds:

- Item name
- Item price
- Price type

- Minimum quantity
- Maximum quantity

Example:

Item	Vendor Price
T-shirt	₹20 per piece
Shirt	₹25 per piece
Trouser	₹35 per piece
Saree	₹150 per piece
Regular clothes	₹80 per kilogram
Shoes	₹250 per pair

Step 5: Vendor manages capacity

The vendor sets:

- Daily maximum orders
- Available pickup slots
- Number of orders allowed per slot

When the vendor reaches the limit:

- The vendor stops receiving new orders for that slot
- The service remains unavailable until capacity becomes available

A vendor without configured capacity is treated as unavailable.

Step 6: Vendor publishes the service

The vendor reviews and publishes the service.

The service becomes visible to customers who are:

- Within the approved radius
- Searching the relevant category
- Selecting an available pickup slot

9. Customer Registration Workflow

Step 1: Customer opens the Customer App

The customer enters a mobile number.

The system sends an OTP.

Step 2: Customer verifies OTP

After successful verification:

- A new customer account is created, or
- The existing account is opened

A new customer enters:

- Full name
 - Email address, optional
 - Profile photograph, optional
-

10. Customer Address and Exact Location Workflow

Step 1: Customer selects an address

The customer can:

- Use current location
- Search for an address
- Select a saved address

Step 2: Google Maps location selection

Google Maps is used only during address selection.

The customer can:

- Search an address
- Detect the current location
- Move the location pin

- Confirm the exact pickup point

The customer then enters:

- House or flat number
- Building
- Road or area
- Landmark
- City
- Postal code
- Address label
- Pickup instructions

The address is saved.

Important map behaviour

The Customer Dashboard does not show an embedded live map.

After the address is confirmed:

- The application displays the selected address as text
- The exact coordinates remain saved
- The vendor or delivery employee can open the location in the normal Google Maps application

The customer tracking screen shows statuses, not a continuously moving vendor map.

11. Customer Home Screen

The Customer Home Screen shows:

- Current selected address
- Search bar
- Service categories
- Recommended nearby vendors
- Available services
- Active order status
- Previous orders

Search bar

The customer can search using:

- Service name
- Category name
- Clothing item
- Vendor name

Example searches:

- Wash and Iron
 - Shoe Cleaning
 - Shirt Dry Cleaning
 - Blanket
 - Vendor name
-

12. Category and Vendor Discovery Workflow

Step 1: Customer selects a category

Example:

Dry Cleaning

Step 2: The system checks eligible vendors

The system checks:

- Customer's confirmed location
- Vendor's confirmed location
- Admin-approved vendor radius
- Vendor active status
- Service active status
- Vendor capacity
- Available pickup slots

Only eligible vendors are shown.

Step 3: Multiple vendors are displayed

The customer sees all nearby vendors offering the selected service.

Each vendor card shows:

- Vendor name
- Service title

- Starting price
- Approximate distance
- Rating
- Estimated completion time
- Available pickup time
- Pickup and delivery availability

Default recommendation

The default result order is:

Nearest Recommended Vendors

The nearest eligible vendor is shown first.

The system does not automatically assign that vendor.

The customer makes the final selection.

13. Search, Sorting and Filters

The customer can filter or sort the vendor results.

Nearest

Shows the closest eligible vendors first.

Price: Low to High

Shows the lowest-priced service first.

Price: High to Low

Shows premium or higher-priced services first.

Best Rating

Shows vendors with the highest customer rating first.

Value for Money

Shows recommended vendors based on a balance of:

- Competitive price
- Good rating
- Reasonable distance
- Reliable order completion

Available Now

Shows vendors with an available pickup slot and open capacity.

Service item filter

The customer can filter by a particular item.

Example:

- T-shirt
 - Shirt
 - Saree
 - Blanket
 - Shoes
-

14. Vendor Selection Workflow

The revised marketplace flow is:

Customer selects a category

- System displays eligible nearby vendors
- Default recommendation shows nearest vendors first
- Customer applies filters if required
- Customer compares services and prices
- Customer opens a vendor listing
- Customer selects the vendor

The customer, not the system, selects the final vendor.

15. Service Details and Item Selection

After opening the service, the customer sees:

- Vendor profile
- Vendor rating
- Approximate distance
- Service description
- Included services
- Excluded services
- Clothing-item list
- Price per item or kilogram
- Estimated completion time
- Available pickup slots

The customer selects clothing items.

Example:

- T-shirt × 2
- Shirt × 3
- Trouser × 1
- Saree × 1

For weight-based services:

- Customer enters estimated weight

Example:

- Wash & Fold — approximately 5 kg

The estimated amount updates automatically.

Example:

Item	Quantity	Price	Amount
T-shirt	2	₹20	₹40
Shirt	3	₹25	₹75
Trouser	1	₹35	₹35

Estimated service amount: ₹150

16. Pickup Slot Selection

The customer selects a 60-minute pickup slot.

Example:

- 9:00 AM–10:00 AM
- 10:00 AM–11:00 AM
- 11:00 AM–12:00 PM
- 4:00 PM–5:00 PM

Only available slots are shown.

A slot is unavailable when:

- The vendor has disabled the slot
 - The vendor has reached the slot capacity
 - The vendor has reached the daily order limit
-

17. Checkout and Payment

Before placing the order, the customer reviews:

- Selected vendor
- Selected service
- Clothing items
- Quantities
- Estimated weight, when applicable
- Pickup slot
- Pickup address
- Estimated amount

The customer pays through Razorpay.

Supported payment methods:

- UPI
- Debit card
- Credit card

- Net banking
- Supported wallet options available through Razorpay

After successful payment, the order is submitted to the selected vendor.

18. Waiting for Vendor Confirmation

The initial order status is:

Waiting for Vendor Confirmation

The selected vendor receives:

- Push notification
- In-app new-order notification

The Vendor Owner/Admin sees:

- Customer name
- Service
- Clothing items
- Quantities
- Estimated weight
- Pickup slot
- Pickup address
- Approximate distance
- Payment status
- Customer instructions

The vendor can:

- Accept
- Reject

Auto-reject

If the vendor does not respond within the configured time:

- The request is automatically rejected
- The customer receives a notification
- The customer can select another vendor

The system does not automatically move the order to another vendor in this revised workflow.

19. Vendor Accepts the Order

When the vendor accepts:

- The customer receives an acceptance notification
- The order becomes confirmed
- An available delivery employee is assigned
- The Vendor Owner/Admin can change the assigned employee
- The delivery employee receives the pickup assignment

The customer sees:

Your order has been accepted.

The Customer App shows:

- Vendor name
- Pickup slot
- Assigned pickup status
- Order items
- Order amount
- Status timeline

The Customer App does not show a live vendor map.

20. Delivery Employee Pickup Workflow

The assigned Delivery Partner opens the order.

The employee sees:

- Customer name
- Pickup address
- Landmark
- Pickup instructions
- Pickup slot
- Customer phone contact option
- Open in Google Maps button

The employee taps:

Open in Google Maps

The normal Google Maps application opens with the customer's exact pinned location.

Google Maps handles:

- Navigation
- Route
- Travel time
- Directions

The LNDRY app itself does not display the navigation map.

The employee changes the status to:

Going for Pickup

The customer receives:

The pickup partner is coming to collect your laundry.

21. Pickup OTP Verification

When the employee reaches the customer:

- The Customer App displays a pickup OTP
- The customer tells the OTP to the employee
- The employee enters the OTP in the Vendor App

If the OTP is correct:

- Pickup is verified
- The order becomes **Picked Up**
- Pickup time is recorded
- The customer receives confirmation

If the OTP is incorrect:

- Pickup is not completed
- The employee cannot move the order forward
- The employee can retry

22. Laundry Received at Vendor

After pickup, the delivery employee returns the laundry to the vendor.

The Vendor Owner/Admin confirms:

Received at Partner

The customer receives:

Your laundry has reached the vendor.

The vendor can now verify:

- Clothing items
- Quantities
- Estimated weight
- Actual received quantity

When necessary, the vendor corrects the actual item count or weight.

The customer sees:

- Original quantity
- Confirmed quantity
- Updated final amount, when applicable

Any final amount must be based on the vendor's already published prices.

23. Vendor Processing Status Workflow

The Vendor App uses the agreed detailed statuses:

1. Received
2. Washing
3. Drying
4. Ironing
5. Packed
6. Out for Delivery
7. Delivered

The vendor selects the relevant next status.

Not every order must use every cleaning stage.

Example:

- Shoe Care may not require Ironing
- Ironing-only service may not require Washing or Drying
- Dry Cleaning can use the relevant processing stage

Customer-facing status view

To keep the Customer App easy to understand, the detailed vendor stages are grouped into the agreed customer timeline:

1. Scheduled
2. Picked Up
3. At Partner
4. Processing
5. Out for Delivery
6. Delivered

While the order is in Washing, Drying, or Ironing, the customer sees:

Processing

The detailed current activity can also appear below it, such as:

Current activity: Washing

24. Packing and Delivery Assignment

When cleaning is complete, the vendor marks:

Packed

The order is now ready for delivery.

The system:

- Assigns an available delivery employee
- Notifies the assigned employee
- Allows the Vendor Owner/Admin to reassign the employee

The customer receives:

Your laundry has been packed and is ready for delivery.

25. Delivery Workflow

The assigned Delivery Partner opens the delivery order.

The employee sees:

- Customer address
- Landmark
- Delivery instructions
- Customer contact option
- Open in Google Maps button

The employee opens the customer's exact location in the normal Google Maps application.

The employee changes the order status to:

Out for Delivery

The customer receives:

Your laundry is out for delivery.

The Customer App shows only the status and order details, not a live map.

26. Delivery OTP Verification

When the employee reaches the customer:

- The Customer App displays a delivery OTP
- The customer tells the OTP to the employee
- The employee enters the OTP

If the OTP is correct:

- Delivery is verified
- The order becomes **Delivered**

- Delivery time is recorded
- The order is completed

If the OTP is incorrect:

- The order cannot be completed
 - The employee can retry
 - Delivery remains pending
-

27. Customer Active Order Screen

The customer sees:

- Order number
- Vendor name
- Selected service
- Clothing items
- Quantities
- Pickup slot
- Pickup address
- Payment status
- Current status
- Detailed timeline
- Pickup OTP when required
- Delivery OTP when required

The customer does not see:

- Embedded live route
- Moving delivery employee marker
- Continuous live employee location

The customer receives status notifications instead.

28. Complete Customer Status Timeline

Order Submitted

→ Waiting for Vendor Confirmation

→ Vendor Accepted

- Scheduled
- Pickup Partner Coming
- Pickup OTP Verified
- Picked Up
- At Partner
- Processing
- Packed
- Out for Delivery
- Delivery OTP Verified
- Delivered

When rejected:

Waiting for Vendor Confirmation

- Rejected by Vendor
- Customer Selects Another Vendor

When the vendor does not respond:

Waiting for Vendor Confirmation

- Auto-Rejected
- Customer Selects Another Vendor

29. Order History and Rating

After delivery, the order appears in Customer Order History.

The customer can see:

- Vendor

- Service
- Items
- Quantities
- Pickup and delivery timestamps
- Payment
- Final amount
- Full status history

The customer can submit:

- Rating from 1 to 5
- Review comment

Only delivered orders can be rated.

30. Vendor Capacity Workflow

The Vendor Owner/Admin manages:

- Daily order limit
- Available days
- Available 60-minute slots
- Maximum orders per slot

When capacity is reached:

- The vendor stops appearing for that unavailable slot
- Existing accepted orders continue
- New customers cannot choose the full slot

The Platform Admin can review and override vendor capacity when necessary.

31. Vendor Performance Dashboard

The Vendor Owner/Admin sees:

- Acceptance Rate
- Completion Rate
- Average Delivery Time
- Average Customer Rating

The dashboard also shows:

- Total completed orders
- Rejected orders
- Cancelled orders

The vendor score is treated as provisional until the vendor has completed at least 10 orders.

32. Vendor Revenue Dashboard

The Vendor Owner/Admin sees:

- Daily earnings
- Weekly earnings
- Monthly earnings
- Per-order earning details

Each completed order shows:

- Order number
 - Service
 - Amount
 - Payment status
 - Completion date
-

33. Admin Operations Workflow

Vendor management

Admin can:

- Review applications
- Approve vendors
- Reject vendors
- Request corrections
- Activate vendors
- Deactivate vendors
- Control service radius
- View service listings
- View vendor capacity

- View vendor performance

Customer management

Admin can:

- View customer profiles
- View saved addresses
- View order history
- Activate or suspend an account

Order management

Admin can:

- View all orders
- View current status
- View assigned vendor
- View assigned delivery employee
- View pickup and delivery OTP verification status
- Override a stuck status
- Cancel an order with a reason
- View rejected and auto-rejected orders
- View the exception queue

Reports

Admin can view:

- Order volume
- GMV by date range
- Vendor performance
- Customer activity
- Completed orders
- Cancelled orders
- Vendor acceptance and completion rates

34. Final Complete Workflow

VENDOR ONBOARDING

Vendor Mobile OTP

- Vendor Application
- Owner and Business Details
- Document Upload
- GST Details if Available
- Exact Google Maps Business Pin
- Requested Service Radius
- Application Submission
- Admin Verification
- Admin Approves Radius and Vendor
- Vendor Receives SMS, Email and Notification
- Vendor Gets Full Access

VENDOR SETUP

Vendor Creates Public Profile

- Adds Delivery Employees
- Selects Laundry Category
- Creates Service
- Adds Clothing Items
- Adds Prices and Quantity Limits
- Sets Daily Capacity
- Sets 60-Minute Slots
- Publishes Service

CUSTOMER DISCOVERY

Customer Mobile OTP

- Customer Selects Current Location or Searches Address
- Customer Confirms Exact Google Maps Pin
- Customer Opens Home
- Customer Uses Search or Category
- System Shows Eligible Nearby Vendors
- Nearest Vendors Appear First
- Customer Uses Nearest, Price, Rating or Value-for-Money Filters
- Customer Compares Vendors
- Customer Selects Vendor

ORDER PLACEMENT

Customer Opens Service

- Selects Clothing Items
- Selects Quantities or Estimated Weight
- Selects 60-Minute Pickup Slot
- Confirms Address
- Pays Through Razorpay
- Order Goes to Selected Vendor
- Waiting for Vendor Confirmation

VENDOR CONFIRMATION

Vendor Reviews Order

- Vendor Accepts or Rejects
- No Response Causes Auto-Reject
- If Accepted, Delivery Employee Is Assigned

→ Customer Receives Acceptance

PICKUP

Delivery Employee Opens Customer Location in Google Maps

→ Employee Goes for Pickup

→ Customer Sees Pickup Status

→ Customer Provides Pickup OTP

→ Employee Enters OTP

→ Pickup Is Confirmed

→ Laundry Reaches Vendor

PROCESSING

Vendor Confirms Items or Weight

→ Received

→ Washing

→ Drying

→ Ironing

→ Packed

→ Customer Sees At Partner and Processing Statuses

DELIVERY

Packed Order Is Assigned to Delivery Employee

→ Employee Opens Customer Location in Google Maps

→ Order Becomes Out for Delivery

→ Customer Sees Delivery Status

→ Customer Provides Delivery OTP

- Employee Enters OTP
 - Order Becomes Delivered
 - Customer Submits Rating
-

35. Included MVP Features

- Customer OTP login
- Vendor OTP login
- Delivery employee OTP login
- Vendor application and document verification
- Vendor approval notifications
- Vendor and delivery-employee role separation
- Vendor service creation
- Clothing-item pricing
- Google Maps address search
- Exact location pin selection
- External Google Maps navigation
- Admin-controlled service radius
- Search bar
- Laundry categories
- Multiple vendors under the same category
- Nearest-vendor recommendation
- Price sorting
- Rating sorting
- Value-for-money recommendation
- Customer vendor selection
- Item quantities
- Per-kilogram quantity
- 60-minute pickup slots
- Vendor capacity
- Razorpay payment
- Vendor accept and reject
- Configurable auto-reject
- Automatic delivery-employee assignment
- Pickup OTP
- Agreed laundry-processing statuses
- Delivery OTP
- Customer order-status timeline
- Order history
- Ratings and reviews
- Vendor performance metrics
- Vendor revenue summary

- Admin order and vendor management
-

36. Explicit MVP Behaviour

The customer selects a vendor.

The platform recommends the nearest eligible vendors first, but does not automatically assign a vendor.

Google Maps is used for:

- Address search
- Current-location detection
- Exact location-pin selection
- Distance calculation
- Opening external navigation for the delivery employee

The Customer App does not display continuous live delivery movement.

The Customer App displays:

- Current order status
 - Notifications
 - Pickup OTP
 - Delivery OTP
 - Order timeline
-
